

eRD6 MPGD Simulation Notes

5/20/19

Present: Kondo, Matt P., Matt B., and Michael

- Michael will pick up the FIT simulation work that has been performed by Matt B.
- Simulation Update
 - Matt B. and Michael are trying to implement tracking information within the EIC Root that is needed for computing tracking residuals and space resolutions for the large GEM trackers.
 - Matt P. would also like to implement the same tracking/hit information to compute tracking residuals and space resolutions in the ongoing cylindrical uRWell detector.
- Next simulation meeting will be replaced by general eRD6 meeting to work on upcoming progress report and funding requests.
